

## PROJECT SCORING RUBRIC

EVALUATE PROJECT REPORT BASED ON THESE 5 PARAMETERS (Score 1-5 each):

1. CORRECTNESS (Weight: 30%)
  - o Meets all specified requirements
  - o Proper implementation of prompt design
  - o Correct LLM chaining approach
  - o Accurate RAG implementation
  - o Proper error handling implementation
2. CODE QUALITY (Weight: 25%)
  - o Clean, readable code structure
  - o Modular design and separation of concerns
  - o Proper error handling
  - o Testable code structure
  - o Follows best practices
3. RESILIENCE (Weight: 20%)
  - o Handles failures gracefully
  - o Implements retry mechanisms
  - o Manages rate limits appropriately
  - o Has fallback strategies
  - o Robust error handling
4. DOCUMENTATION (Weight: 15%)
  - o Clear README with setup instructions
  - o Explanation of design choices
  - o API documentation
  - o Trade-offs discussion
  - o Future improvements outlined
5. CREATIVITY / BONUS (Weight: 10%)
  - o Innovative approaches beyond requirements
  - o Additional features (authentication, monitoring, etc.)
  - o Optimization techniques
  - o Scalability considerations
  - o Deployment strategies

CALCULATION: - Each parameter scored 1-5 - Weighted average → final project score (1-5 scale) - Provide specific feedback for each parameter
